VAISHNAVI SADANAND TANDEL

Entry-Level AI/ML Engineer | Python | Machine Learning | Deep Learning | SQL | Generative AI

Bangalore, Karnataka | +91-8970351744 | vaishnavitandel52@gmail.com | linkedin.com/in/vaishnavitandel | github.com/VaishnaviTandel

PROFESSIONAL SUMMARY

Computer Science Engineering graduate (CGPA 8.74/10) with hands-on experience in data science, machine learning and deep learning, including a multimodal CNN–LSTM healthcare model deployed as a Flask application. Strong in Python, SQL, statistical analysis and data visualization (Tableau, Excel), with REST API and Agile team experience from an industry internship. Skilled in Generative AI tools (prompt engineering, ChatGPT, GitHub Copilot, Claude Code) for accelerating development. Strong problem-solver and clear communicator, eager to contribute to AI-ML and Generative AI solutions, model evaluation and monitoring, and responsible AI practices in collaborative, client-facing teams.

TECHNICAL SKILLS

- **Programming Languages:** Python, SQL, Java, JavaScript
- **AI/ML:** Machine Learning, Deep Learning, Model Training & Evaluation
- **Generative AI:** Generative AI, Prompt Engineering, LLM-Assisted Development
- **Frameworks & Libraries:** TensorFlow/Keras, NumPy, Pandas, Flask, React.js, Node.js, Express.js
- **Databases & Visualization:** MySQL, MongoDB, Tableau
- **Salesforce Development:** Apex, Lightning Web Components (LWC), Salesforce Platform
- **Cloud & Tools:** AWS (EC2, S3), Git, GitHub, Postman

KEY PROJECTS

Multimodal Deep Learning Framework for Early COPD Prediction *GitHub*

Python, TensorFlow/Keras, CNN–LSTM, MLP, MFCC, Librosa, Flask, NumPy, Pandas

- Built an AI-based diagnostic system fusing lung audio (MFCC features) and spirometry/clinical data, achieving [98]% accuracy.
- Designed and trained CNN–LSTM and MLP models, then combined them in a multimodal pipeline for COPD risk prediction.
- Preprocessed and optimized datasets to improve model performance, stability and generalization; evaluated models using accuracy, confusion matrix and validation splits to monitor generalization and detect overfitting.
- Deployed the model as a Flask web application for real-time risk prediction.

ERA5 Wind Data Processing Tool *GitHub | Live Demo*

Python, Flask, SQLite, pandas, xarray, JavaScript

- Developed a data-driven analytics web tool to retrieve and process ERA5 climate data from the Copernicus CDS API.
- Built analytics for wind speed, direction and power density; automated NetCDF/CSV report generation.
- Implemented JWT authentication and SQLite-backed data handling.

Adventure Trekking Platform with Booking & Admin Management *GitHub | Live Demo*

MongoDB, Express.js, React.js, Node.js, Tailwind CSS, JWT, Nodemailer

- Built a full-stack MERN application with Admin/User roles, real-time seat availability and automated email notifications.
- Designed 15+ secured REST APIs with JWT and optimized MongoDB queries for performance.

WORK EXPERIENCE

Software Development Intern, Abhimo Technology *Jan 2026 – May 2026*

- Developed REST APIs using Node.js and Express.js for core application features.
- Built React.js UI components, improving responsiveness and user experience.
- Integrated third-party APIs and MERN modules for seamless data flow.
- Performed API testing and debugging with Postman in an Agile team, collaborating with cross-functional members and communicating progress and technical updates in regular stand-ups and reviews.

EDUCATION

B.E. in Computer Science & Engineering, Sahyadri College of Engineering and Management (VTU) *Dec 2022 – May 2026*

CGPA: 8.74 / 10

Pre-University (PCMB), Government PU College Aversa, Karnataka *May 2020 – Apr 2022*

Percentage: 85.5%

CERTIFICATIONS

- **Data Analytics Job Simulation, Deloitte Australia** (Oct 2025) – analyzed data and built business dashboards using Tableau and Excel.
- **Database & SQL Course** (Feb 2025) – database architecture, normalization, advanced SQL and query optimization.
